Meeting at the PTP site this morning.

Aaron,

I met with Ginger (who used to do the testing) this morning at the site and went through the testing with her. She is pretty sure that Gen (who is no longer there) was not taking the proper precautions. So, I went through the testing with her. The effluent sampling takes some patience. She said she used to get hits when she first sampled it because the depth of the water in the tank is very shallow and she has to be very careful not to get the "gunk" off the bottom of the tank.

That would explain the high effluent counts. The effluent looked good. The system appears to be working well.

Justin and I are working on the permit renewal. You should be seeing that soon.

Regards,

Brenda Stein P.E., M.B.A.
